7. Simple Substitution Cipher — Decryption

CODE:

```
ciphertext = """53‡‡†305))6*;4826)4‡.)4‡);806*;48†8¶60))85;;]8*;:‡*8†83
(88)5*†;46(;88*96*?;8)*‡(;485);5*†2: *‡(;4956*2(5*—4)8¶8*
;4069285);)6†8)4‡‡;1(‡9;48081;8:8‡1;48†85;4)485†528806*81
(‡9;48;(88;4(‡?34;48)4‡;161;:188;‡?"""

mapping = {}

print("Enter ciphertext symbol and plaintext letter.")
print("Enter END when finished.")

while True:
    symbol = input("Symbol: ")
    if symbol.upper() == "END":
        break

    letter = input("Plaintext letter: ")
    mapping[symbol] = letter

plaintext = ""

for ch in ciphertext:
    plaintext += mapping.get(ch, ch)

print("Decrypted message:")
print(plaintext)
```

OUTPUT:

Output

```
Enter ciphertext symbol and plaintext letter.
Enter END when finished.
Symbol: END
Decrypted message:
53‡‡†305))6*;4826)4‡.)4‡);806*;48†8¶60))85;;]8*;:‡*8†83
(88)5*†;46(;88*96*?;8)*‡(;485);5*†2: *‡(;4956*2(5*—4)8¶8*
